GEOVENT

Vehicle Exhaust Extraction Systems
for defense and military

Customization and know-how

Over the years Geovent has produced wide variety of exhaust extraction solutions for military and defense vehicles.

Military and defense often use highly specialized vehicles which require custom exhaust solutions with custom built nozzles and high temperature resistant hoses and fans.

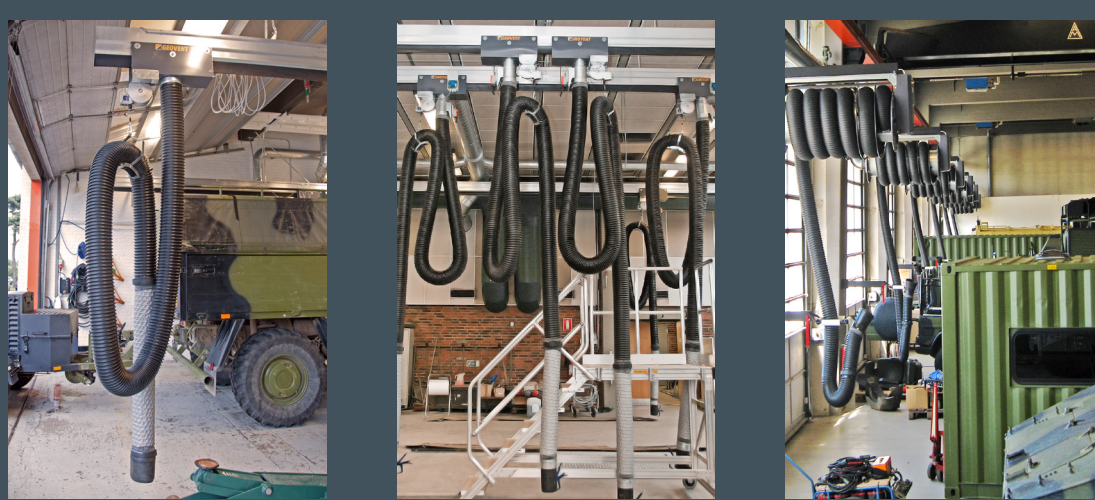

As these components are rarely stock items, the solutions are constructed to suit specific requirements.

Some of the extraction principles we know so well from lorry repair shop also apply to military garages. However, not many military vehicles are the same. At Geovent we specialize in developing these parts and our expertise and flexibility secure you an efficient and durable solution and at the right price.

Hose trolley mounted on channel duct. Easy and flexible positioning.

Advanced electronics control for energy efficient extraction.

Custom nozzles for military vehicles.

Examples of custom nozzles we have developed for:

- Light tanks
- Heavy tanks
- armored personnel carrier
- armored fighting vehicles

The nozzles shown are built in steel and are high temperature resistant.

Small arms conservation cabinet. Submerges metal parts of small arms into a perservative lubricant container to protect against corrosion.

Extraction arms for welding smoke.
