

Fans

Soundbox – size 146 – 630

The Geovent Soundbox is made of full-galvanised steel, which offers effective protection against weather and wind to both fan and motor. Simultaneously, the box reduces the sound pressure level by approx. 8 - 15 dB(A), and thus it is the optimum solution, when a low noise level required.

The Soundbox is made of galvanised plate and supplied with 50 mm thick insulating materials (glass wool). Inside, the box is lined with a galvanised and perforated steel plate. Furthermore, a sound absorber is saved on the suction side, since this sound absorber is built-in by means of the front suction chamber. The box is supplied with an ø80 mm air inlet on the suction side for the cooling of the motor.

Soundbox
